

Having the opportunity of collaborating with USM, we have created the "THE AXIS". Interchangeable, reusable pieces have the potential to improve versatility. It's a piece that allows us to also change the way we perceive the quality of space. This new design starts from the walls, curves down to the floor, and appears and disappears to be porous within our library and bookstore area.

"THE AXIS" tells that USM is all about being able to change easily and thinking about the future. It can be used for lots of different things - from holding books to dividing up the room while creating sitting areas, hang-out spots.

Using USM's ball-and-tube system, the shelves are strong, flexible, and can be rearranged if needed, making it last longer, and helping the environment. "THE AXIS" is a stretch of design, proving USM's focus on modular and long-lasting vision.
